

# README

## Folders in the Repo:

- **\_coordinators:** contains forms for coordinator info (that is found on the left side of a data standard page in a box with a picture)
- **\_data:** contains yaml files used to change the declaration of each data-type used on the website (themes, categories, data standards). The schema folder contains default.yml, the file used to outline what parameters are needed for a data standard.
- **\_datastandards:** contains data standards in md files created using the parameters declared in /\_data/default.yml.
- **\_includes:** contains all of the includes info referenced in other codes in the repo (mostly just forms, buttons, other basic web functions used in the site). Also contains all of the add forms that can be accessed upon login (every file ending with -form.html) . To change the header of the website, you need to edit header.html.
- **\_layouts:** contains html files detailing the pages reached when clicking on certain tabs in the header (default.html, datastandard.html, coordinator.html).
- **css:** contains main.css, the sole css file.
- **img:** contains all of the images and svg's used in the website. The logo's are found in the main img folder.
- **scripts:** contains all of the javascript needed to build the website. Within /scripts/src/components are all of the scripts related to the data structures that hold the data standards and coordinators.

## Important Files in the Master Folder:

- **\_config.yml:** This contains all the basic info about the site including the titles/classpaths and heroku authorization info.
- **setup.md:** heroku authorization setup instructions
- **coordinators.html/categories.html/datastandards.html:** contains site navigation path info (what will appear next to the house on the site's navigation bar)
- **add-coordinator.html/add\_datastandard.html:** contains the messages returned to an authorized user after he/she attempts to add or update a coordinator or data standard.

## Summary of Edits:

- Changed every occurrence of the strings “Dataset” and “dataset” to “Datastandard” and “datastandard”, respectively. Additionally, the printed occurrences of “Datastandard” to “Data Standard”
- Changed every occurrence of the strings “Organization” and “organization” to “Coordinator” and “coordinators”, respectively
- Added a categories tab to the navigation bar. Once clicked, it redirects to a page similar to the home page’s categories section
- Completely redone dataset page, now data standard page. Reworked the left side of the page to show more information on the coordinators, added in relevant fields for data standards
- Reworked the “add” pages to include the relevant fields for each data standard and coordinator
- Removed excess code/files about resources, maintainers, outdated repo info, etc
- Replaced JKAN logos with svg images
